## Overview

The Keil MCB2140 Evaluation Board introduces you to the Philips LPC2140 ARM family and allows you to create and test working programs for this advanced architecture.

An on-chip USB interface, two serial interfaces, a speaker, analog input (via potentiometer) and eight LEDs are available. Debugging is supported via the JTAG interface and the ULink USB-JTAG adapter. An evaluation copy of the Keil ARM development tools is included.

The Keil MCB2140 evaluation board connects to your PC using the serial port (for Flash download with the Philips LPC2000 FLASH Utility) or the JTAG interface (for program debug using the Keil [ULink USB-JTAG Adapter](#) and the [µVision IDE and Debugger](#)).

### Quick Links

[Get A Quote](#)

The MCB2140 evaluation board includes an on-chip USB interface, serial ports, eight LEDs, and a speaker. It allows you to experiment with USB, ARM applications, and the Philips LPC2140 devices.

## Components Included

The MCB2140 Evaluation Board includes the following:

- [MCB2140 Evaluation Board](#),
- [Keil ARM Evaluation Tools](#).

## Example Programs

- [USB Mass Storage Example](#)
- [USB HID \(Human Interface Device\) Example](#)
- [USB Audio Device Example](#)

## System Requirements

- PC with one available serial port,

- Windows 95/98/ME/NT/2000/XP,
- One CD-ROM drive,
- [ULink](#) USB-JTAG Adapter for high-performance Debug/Download (optional).

## Evaluation Software

The MCB2140 Evaluation Board includes [Keil Evaluation Tools for ARM](#). This helps you get started writing programs to test the microcontroller and its capabilities. Many sample applications including several USER examples for the MCB2140 are included.
